

The IARIA-lite Formatting Example of its CTAN Package and LaTeX Class

Compatible With All LaTeX Distributions, but Without IARIA Specifications for Citation Style

Abstract—This paper demonstrates an example of a paper, based on the `iarialite` LaTeX class. The `iarialite` class is compatible with all LaTeX distributions, in contrast to `iarialite` class. To achieve this compatibility, the lite variant dispenses with implementing the IARIA specifications for citation style. However, this example paper includes the necessary citation style adoptions for a `pdflatex/bibtex/biber` technology stack in its source code, you need to adopt them for any other LaTeX distributions. The example is intended for beginners, e.g., undergraduate students. It contains a basic outline template and usually fills it with dummy text. Graphic exclamation marks highlight important remarks.

Keywords-template; lorem ipsum.

{ For beginners: Do NOT remove the abstract, this section is mandatory. Do NOT use special characters, symbols, or math in your title or abstract. Do NOT use `cites` in your abstract.}

I. INTRODUCTION

The IARIA formatting is based on IEEE style. The unofficial IARIA-lite \LaTeX class is based on `IEEEtran` class [1]. The IARIA formatting rules [2] are adopted from the IEEE template and formatting specifications [3]. In addition, be aware of the supplementary IARIA editorial rules [4]  that provide a beginner-friendly set of further advices. It is recommended to use a grammar tool, e.g., the LanguageTool [5] browser plugin in combination with Overleaf [6].
